Engage

the Right Health Plan for Each Patient

We apply our vast experiences with payers of all kinds, and our reimbursement expertise to help case managers navigate the complexities of various insurance plans and select the right plan for their patients specific medical needs.

We incorporate each patient's unique pharmacological and situational needs into our recommendations, and will engage with providers and case workers to help select the plan that optimizes and supports their patient's case.

Patients and families need medication without delay. At Vibrant Care, waiting for insurance approval won't get in the way of getting needed medication. We work with agencies, families, and patients to ensure medication is delivered and received during the wait for approval.

Enhance Treatment Outcomes & Compliance

Vibrant Care's unit and multi-dose Adherence Packaging and complementary patient education programs, provide a significant positive impact on medication adherence and clinical outcomes, while reducing costly errors and empowering patients to comply with treatment.

We operate an onsite Injectables Center with certified pharmacists to administer Long Acting Injectables such as Invega Sustenna and Risperdal Consta.

Committed to Helping People Get Well

Your Partner in Optimizing Behavioral Health Treatment

Service | Commitment | Expertise

Behavioral Health Expertise

Vibrant Care Pharmacy was built on the belief that partnerships between the patient, care provider, and pharmacy are the foundation to effective and robust patient care. While many pharmacies can provide you with medications, Vibrant Care Pharmacy provides you with round the clock exceptional service, commitment and expertise to ensure dynamic health.

Our pharmacists have expertise in how medications are effectively used to treat behavioral conditions and assist with drug monitoring, pharmacotherapy recommendations and the design of drug treatment plans.

Empower Providers and Case Managers to Optimize Treatment

Through our secure online portal, RxSend, providers can instantly access patients' medical records, providing a comprehensive 360° view of a patient's medication regimen.

RxSend displays each patient's medications including dosages, frequency, prescription numbers, known allergies, patient diagnosis, and any ancillary orders needed to assure appropriate care.

Through the online portal your practice can;

- Place new orders
- Refill existing prescriptions
- Check drug interactions
- Verify compliance charts
- Update patient profile information
- Check medication order status
- Monitor patient prescription histories
- Check resident reports and historical information
- Check medication order status
- Monitor patient prescription histories
- Check resident reports and historical information

Expedite

Authorization, Turn Around and Refill Requests

Vibrant Care Pharmacy can complete Authorizations with plans that allow for pharmacies to complete the process, freeing up your time and speeding up your turn around.

By navigating the complexities of authorization and reimbursement, we help providers save time and lower administrative costs. We can complete or assist with prior authorization (PA) initiations, PA appeals, copay assistance, clinical management, and compliance and persistency programs, and much more.

We know your time is valuable and many patients are on multiple prescriptions. Vibrant Care Pharmacy ensures Med Synchronization so that the provider only receives one refill request to review for all the patient's medications at a time instead of individual refill requests for each medication in the regimen.

Ensure

Uninterrupted treatment at all stages of care

We collaborate with case managers and providers to manage patients during Transitional Care from an acute treatment setting, ensuring that all medications are available and delivered at their new locations.

Providers and patients can consult with the pharmacist at any time during the treatment process to receive advice on psychiatric drugs, doses, side effects and outcomes.
